Message from the Guest Editor

Dear Colleagues,

Like all branches of physics and engineering, electromagnetics relies on mathematical methods for modelling, simulation, and design procedures in all of its aspects (radiation, propagation, scattering, imaging, etc.). The lists above are by no means exhaustive; there is a plethora of additional algorithms, having evolved particularly over the last few years, designed to reduce the complexity and simultaneously improve the accuracy of calculations. In this Special Issue, the most recent advances thereof will be presented, to illustrate the state of the art in mathematical techniques in electromagnetics.

Prof. Dr. Hristos Anastassiu
